

Does your old house need a foundation?

1. Hang Panels.

2. Pump Concrete.

3. Perimeter Foundation.

ANCHORPANEL® FOR RETROFIT FOUNDATIONS

Cast-in-place panels provide superior seismic strength
(For a lot less money).

No forming. No framing. No ponywall making.

Existing structures ***don't*** have to be raised or lowered or ...
Simply attach the panels and pump concrete in the trench.
Model Building Code conformance. ICC-ER Tested.

And just look at the results!

Add color, texture, ledgers...

The perfect retrofit foundation:

No forming. No framing. No waiting. No compromise.

High and low foundation walls are equally easy.

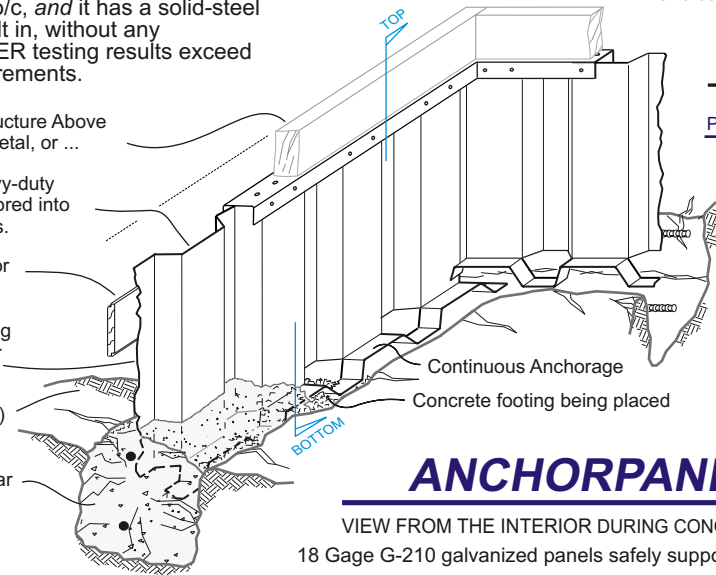

ANCHORPANEL low-cost retrofit foundation in progress.

Satisfies structural requirements in all seismic zones for 2-story buildings.

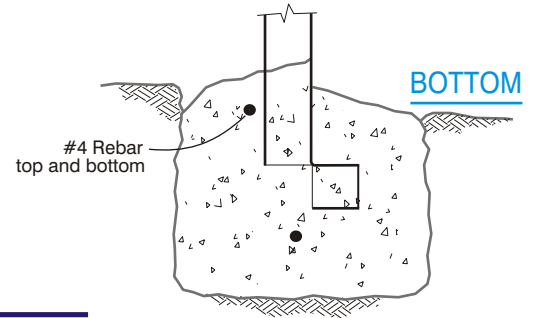

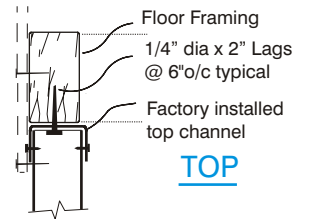

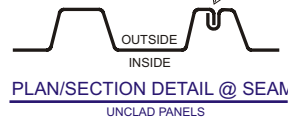

ANCHORPANEL IS SUPER STRONG :

Heavy corrugations serve as bearing-wall studs every 6" o/c, and it has a solid-steel shear panel built in, without any fasteners! ICC-ER testing results exceed all design requirements.

- Perimeter of Structure Above Can be wood, metal, or ...
- Continuous heavy-duty panels are anchored into concrete footings.
- Optional Siding or veneer covering
- Protective coating can be factory or field applied
- Backfill (optional)
- Footing with rebar

Continuous vertical flanged seam
With construction adhesive applied
and continuous urethane caulk exterior

ANCHORPANEL®

VIEW FROM THE INTERIOR DURING CONCRETE PLACEMENT
18 Gage G-210 galvanized panels safely support 3000 plf bearing and 1000 plf shear, per structural code calculations & ICC-ER destructive testing.

Trench and footing concrete per code structural requirements.

A two-story hexagonal tower needs help.

The ANCHORPANEL solution, as a cement-coat is drying.

Retrofit? New Construction? Panelized? Manufactured?
Sloping sites? Backfill? Two-story strength? High sets? Low sets?

No problem.
A perfect fit.
